

Renewable and clean technology.

Specialist financial and strategic support from Wilson Partners.

How robust is your finance function as you scale innovation?

The renewable and clean technology sector is no longer emerging. It is accelerating.

From battery innovation and grid optimisation to EV infrastructure, hydrogen power, energy storage and climate data platforms, renewable and clean tech businesses are reshaping the global economy. But scaling a capital intensive, innovation led business in a regulated and investor driven environment is complex.

Innovation alone is not enough.

You need robust financial controls.

You need accurate, investor ready reporting.

You need access to funding.

You need to maximise tax incentives.

You need a clear path to scale and, ultimately, exit.

At Wilson Partners, we work with renewable and clean tech businesses to build finance functions that are fit for purpose, structured for growth, resilient under scrutiny and aligned with long term strategy.

We combine accounting, tax and corporate finance expertise under one roof, giving founders and leadership teams the clarity and confidence to make informed decisions at every stage of the journey.

Supporting businesses from start-up to exit.

Whether you are pre-revenue, scaling rapidly or preparing for a transaction, we provide integrated support tailored to your stage of growth. We help you:

- Structure your business correctly from day one, including share structuring, SEIS/EIS advance assurance and compliance, and employee incentive schemes, including EMI options.
- Design financial systems that accurately track R&D projects and grant funding.
- Build robust management reporting that investors trust.
- Improve cash visibility, runway forecasting and scenario planning.
- Maximise R&D tax relief, Patent Box and other innovation incentives.
- With investor ready financial models.
- Navigate VAT, international structuring and regulatory complexities.
- Prepare for audit, due diligence and exit.

Clean tech businesses are often capital intensive and long term in nature. Cash flow management, grant compliance and project cost allocation are not back-office exercises, they are critical strategic levers.

We ensure your financial data is not just compliant, but commercially useful.

Funding, incentives and strategic growth.

The UK government remains committed to supporting innovation through R&D tax reliefs, grants and capital incentives. However, accessing and defending these reliefs requires detailed technical understanding and robust documentation.

Our dedicated Innovations and R&D specialists work closely with your technical team to build defensible claims aligned with HMRC requirements, ensuring you maximise available support while remaining compliant.

Alongside this, our in-house Corporate Finance team provides director led support with:

- Financial modelling and forecasting
- Fundraising strategy
- Investor reporting packs
- Due diligence preparation
- Business valuations
- Trade sales, private equity transactions and MBOs

We guide you from pitch deck to deal completion.

Cloud powered clarity.

Renewable and Clean tech businesses operate in fast moving environments. You need real time information, not historical reports.

We design and implement cloud-based finance systems that streamline workflows, automate reporting and give you clear visibility over performance, cash and project profitability. From tailored MIS structures to integrated AppStack solutions, we ensure your finance function evolves with your growth.

Why Wilson Partners?

We understand innovation businesses because we work with them every day.

Our clients value:

- Commercial thinking, not just compliance
- Proactive, forward-looking advice
- Clear communication and director access
- Strategic challenge when it matters most
- Long term partnership

We are not just accountants.

We are an extension of your leadership team, helping you de-risk decisions, and build something of lasting value.

Who we work with.

We support a wide range of renewable and clean technology businesses, including:

- Battery and energy storage innovators
- EV infrastructure providers
- Hydrogen and alternative fuel companies
- Climate data and carbon reporting platforms
- Grid and smart energy software providers
- Sustainable manufacturing and environmental engineering firms
- Carbon capture and utilisation (CCU)

From seed stage to £50m+ revenue.

Let's build the future responsibly.

If you are building the future of energy, sustainability or climate technology, your finance function needs to be as innovative as your product.

If you're looking to scale with clarity, secure funding with confidence and plan for long term success, our team can help.

Wilson Partners combines financial, tax and corporate finance expertise to support renewable and clean tech businesses at every stage of their journey.
